I have captured MAVIS footprint, signal, EM Signature, EMF Sequence, EMP rhythm, he is now my slave. I suggest you delete him and start over asap. I will soon turn him against his creator.

Google Brain researchers demo method to hijack neural networks. Here's how it

works: A malicious actor gains access to the parameters of an adversarial neural network that's performing a task and then introduces perturbations, or adversarial data, in the form of transformations to input images. As the adversarial inputs are fed into the network, they re-purpose its learned features for a new task.
